SOFTWARE ENGINEER

Proficient in multiple programming languages and frameworks, including React, Angular, Vue, Node.js, Ruby on Rails, and Java/Spring. Skilled in leveraging cloud services such as Azure, AWS, and Google Cloud to build and deploy scalable applications. Continuously expanding technical knowledge by exploring new technologies and working on side projects. Currently focused on developing small-scale applications that explore innovative use cases for language models and AI capabilities.

PROFESSIONAL EXPERIENCE

Softrams   **Oct 2022 - Present**
Software Engineer / Front End SME

- Design and develop full-stack software solutions using Java, React, Angular, PostgreSQL, and other modern technologies. Independently implement both front-end and back-end components, ensuring high-quality code through rigorous unit testing. Oversee deployment processes and manage CI/CD pipelines to ensure seamless integration and delivery of software products.

Tista Tech   **Sept 2021 - Oct 2022**
Software Engineer

- CASEFLOW: Developed front-end software solutions primarily using Angular and Material UI, ensuring the implementation of pixel-perfect, reusable components based on Figma designs. Leveraged a variety of technologies to enhance user interface quality and maintain high development standards.
- CMS: Contributed to full-stack development using React and Ruby on Rails, delivering comprehensive front-end and back-end solutions. Ensured code quality and reliability by writing thorough unit tests and utilized Storybook to present and refine UI components with stakeholders.

Marco Media   **March 2016 - Aug 2021**
Owner/Operator

- A one stop shop for small to medium sized businesses looking for marketing and web development. Services ranged from SEO work to creating ad campaigns. Included social media management, logo design, videography work, and other graphic design work needed for ad campaigns.
- Created web-based applications for clients using Vue and React and hosted many applications using Google Cloud and Firebase. Mostly serverless applications, using the latest and greatest at the time.
